SLOANE KEAY DAVIDSON

TECHNICAL SKILLS

- Languages: JavaScript, Python, Java, C++, SQL, HTML, CSS
- Frontend: React, Vite, Redux Toolkit, React Query, component-based UI development
- Backend & APIs: Node.js, Express.js, REST APIs, JSON, enterprise integrations
- Data: Oracle SQL, PostgreSQL/Supabase, relational data modeling, FHIR/HL7
- Cloud & DevOps: OCI, Docker, Kubernetes/OKE, Jenkins, GitHub/GitLab, CI/CD, Terraform exposure, Linux
- Engineering: System architecture, production troubleshooting, testing, dependency remediation, Agile/Scrum, Jira, AI-assisted development

PROFESSIONAL EXPERIENCE

Oracle Health | *Software Engineer / Integrated Tech Consultant & Architect*

03/2023 – Present

- Develop and support production applications across federal and commercial healthcare environments using React, JavaScript, Node.js/Express, Oracle SQL, APIs, and enterprise integration technologies.
- Own full-stack enhancements from requirements through implementation, testing, release support, and production troubleshooting, including permissions, administrative tools, database-backed workflows, and security-related changes.
- Support cloud modernization and DevOps activities involving OCI, Docker, Kubernetes/OKE, Jenkins CI/CD, Git-based workflows, and infrastructure baselines for federal applications.
- Translate complex healthcare and federal requirements into technical solutions while collaborating with engineering, architecture, implementation, and client stakeholders in Agile environments.

KNX Technologies LLC | *Founder & Full-Stack Engineer* *05/2026 – Present*

- Built and launched a full-stack SaaS platform using React/Vite, JavaScript, Supabase/PostgreSQL, React Query, and Stripe Connect, with workflows spanning payments, roles/permissions, events, messaging, and administration.
- Own product development end to end, including UX decisions, data modeling, backend logic, integrations, debugging, deployment, and iteration based on real user and organizer needs.

Department of Defense (NAVSEA) | *Computer Scientist* *(Federal Contractor)* *2022*

- Developed, compiled, tested, and debugged C++ software in Linux-based classified environments supporting Special Operations systems.
- Used GitLab-based workflows to validate fixes, document technical changes, and prepare reliable software updates for secure release.

ENGINEERING PROJECTS

Software Remediation Platform - Contributed to remediation workflows addressing package vulnerabilities, dependency issues, upgrades, and maintainability across enterprise applications.

OSCAR Healthcare Application - Implemented React/Node features, mapped frontend behavior to Oracle SQL, resolved live access-logic defects, and improved administrative UI and permissions.

EDUCATION

M.S. Computer Science (Software Engineering) 2022 — Kennesaw State University | GPA 3.8
