SLOANE KEAY DAVIDSON

Active Federal Security Clearance

CORE SKILLS

- **Product Management:** Product requirements, Prioritization, Roadmap planning, Backlog management, User/operational feedback, Launch & iteration, Cross-functional delivery
- **Platforms & Systems:** Cloud platforms, APIs & integrations, Relational data, Administrative tooling, Roles/permissions, Production reliability. Enterprise workflows
- **Technical:** JavaScript, Python, React, Vite, Node.js/Express, REST APIs, SQL, PostgreSQL/ Supabase, Oracle SQL, JSON
- **Cloud & Delivery:** OCI, Docker, Kubernetes/OKE, Jenkins CI/CD, GitHub/GitLab, Linux, Terraform exposure, Agile/Scrum, Jira
- **Domain:** Digital health, Clinical workflows, FHIR/HL7, Data interoperability, HIPAA, Federal/regulated environments, AI-assisted development

PROFESSIONAL EXPERIENCE

Software Engineer II / Integrated Tech Architect / Project Manager | *Oracle*
03/2023 – Present

- Own healthcare software enhancements from requirements through implementation, testing, release support, and production troubleshooting across federal and commercial applications using React, Node.js/Express, Oracle SQL, APIs, and enterprise integration technologies.
- Led eCR implementation programs for approximately 50 healthcare clients from kickoff through soft and hard go-live, coordinating schedules, dependencies, change management, stakeholder communication, and data-quality follow-up.
- Translate clinical, operational, security, and federal requirements into technical solutions and scoped engineering work while partnering with engineering, architecture, implementation, and client stakeholders in Agile/Jira environments.
- Build and support permissions, access-control, administrative, and database-backed workflows; resolve live defects and improve production reliability for healthcare applications.
- Support cloud modernization and software delivery practices involving OCI, Docker, Kubernetes/OKE, Jenkins CI/CD, Git workflows, Linux, and infrastructure baselines.

Product Owner & Full-Stack Engineer | *KNX Technologies LLC*
05/2026 – Present

- Built and launched a production SaaS platform, owning product priorities, UX decisions, architecture, data modeling, integrations, deployment, production support, and continuous iteration based on real organizer and user needs.
- Designed multi-user product capabilities spanning events, payments, ticketing/fulfillment, roles and permissions, messaging, moderation, administration, and operational workflows using React/Vite, Supabase/PostgreSQL, React Query, APIs, and Stripe Connect.
- Translate user and operational friction into prioritized product requirements, workflow changes, internal tools, and interface improvements while balancing technical constraints, reliability, and business needs.

- Use AI-assisted engineering workflows for investigation, implementation, testing, debugging, documentation, and release validation across a rapidly evolving full-stack product.
- Improved platform performance and developer efficiency through request consolidation and data/media optimization, including reductions of more than 99% in multiple high-volume payloads and elimination of redundant per-card requests.

Computer Scientist (Federal Contractor) / ***Department of Defense (NAVSEA)***
05/2022-10/2022

- Developed, compiled, tested, debugged, and documented C++ software in Linux-based classified environments supporting Special Operations systems.
- Used GitLab-based workflows to validate changes, prepare reliable software releases, and maintain clear technical documentation in a security-sensitive environment.
- Improved an existing statistics interface through feature development and usability-focused changes while working within disciplined federal release processes.

Biotech Graduate Research Assistant & Instruction Leader / ***Kennesaw State University***
08/2018-12/2022

- Supported interdisciplinary biotechnology and computing research, synthesizing technical and scientific information across complex subject areas.
- Researched and drafted an academic paper on DNA and RNA editing, translating scientific literature into structured analysis and clear written findings; the draft was not published.
- Contributed research and technical communication skills to interdisciplinary academic work, including work associated with an autonomous-vehicle publication.

Earlier Leadership & Operations | ***Hilton Hotels • Arbor Terrace • Petco***
2019 – 2022

- Built people-management and operations experience across customer-facing organizations, strengthening prioritization, communication, service design, vendor coordination, and execution skills used in product work.
- Managed an eight-person Petco team, including hiring, training, coaching, delegation, performance management, reporting, finances, and day-to-day operational prioritization.
- Coordinated customer requirements, vendors, events, and cross-department execution at Hilton; supported CRM/CSM workflows and technology issues, while Arbor Terrace added contracts, administrative operations, and cross-functional coordination.

EDUCATION

M.S. Computer Science (Software Engineering) 2022 — Kennesaw State University | GPA 3.8

B.A., English, Kennesaw State University, 2019 | GPA 3.8
